

ECOFLOW

Water Purification Unit 4/6 m³

Our mobile water purification units are available from 4 – 28 m³/h mounted on trailer or skid. Designed to purify surface water from lakes, rivers or wells with turbidity up to 800 N.T.U. The unit is capable of producing drinkingwater free of physical and bacteriological contaminations.

The purification system has been used and proven it's liability in emergency-situations for more than 20 years. The latest version with modifications was released in 2014.

Treatment process:

- 1 Suction and straining (Diesel motor pump)
- 2 Flocculation / Coagulation (alum sulphate – anionic/cationic polymer)
- 3 Filtration (sand and carbon filter)
- 4 Desinfection (inline venturi) - HTH Chambre

Packing list:
