

Water Storage Tank - Corrugated Steel w/PVC liner

The tanks are engineered to provide a safe economic solution to the problem of liquid storage. They are supplied in kit form on custom designed pallets for ease of shipping and installation.

A worldwide installation service is available if required. EcoWaters water storage tanks have been approved for the storage of cold water under the British 'water bylaws scheme', certificate number 9705017.

Included in your price for a standard Galvanised Steel Water Tank kit are:

- Corrugated, galvanised, curved steel panels, with punched bolt holes
- A tailored liner manufactured in PVC, EPDM, Butyl or PE
- 12mm (1/2") PVC capping to cover the top edge of the tank
- 25mm (1") PVC capping to trap the overlap of the liner over the top of the 12mm capping 25mm (1") spring clips, to hold the capping in place
- Straining wire and strainer - to prevent the liner from slipping into the tank M10 x 20mm plated bolts, nuts and washers
- Holding down brackets and fixing bolts
- Drilled panel to accept your chosen size of tank outlet assembly

PVC Roof Cover A heavy duty tailored

PVC cover draped over a centre support and held in position by elasticated straps attached to galvanised eye nuts. The PVC cover offers an economical means of preventing debris from entering the tank and is available for all tank sizes up to 7.31 metres (24') diameter.

Galvanised Steel Water Tanks Capacity: 6 100 litres up to 2 000 000 litres
 6,1 m3 – Diameter 1,83m x Height 2,29m
